I am a 22 years old highly motivated french individual who just finished his educational path and is eager to start his professional career. I have had the chance to travel a lot and live in different countries which allowed me to master the English language and be more open minded to different people and cultures.

I studied a computer engineering degree for three years but I was not satisfied with the outdated ways of teaching, the very little focus on programming subjects and the absence of emphasis on good programming practises. All these reasons and my taste for problem solving led me to interrupt my degree and direct myself to doing what I truly like: programming. I hence decided to attend a full stack web development bootcamp in order to perfect my skills. I was able to make my hard work and my coding abilities stand out and was offered a position of teaching assistant for the next batch of students that I accepted and will be undertaking in january.

I decided to apply to bending spoons for several reasons. Firstly, being part of a team within a company that has an attractive internal culture is important to me. Secondly, I highly value the opportunity to be part of an already established company and have the ability to work in a team with experts in their fields as I believe that will help me learn a lot in technical fields but also on a personal level. Finally, as a programming enthusiast I value the fact that Bending Spoons has a varied tech stack a lot, which will give me the possibility to extend my knowledge to various horizons.

Furthermore, I think I would be a good fit for this position as I believe I have acquired the engineering mindset through my studies. Even if I have gained knowledge of full stack web development, I have a strong preference for the server side and that is where my skills are focussed on. Having a flexible schedule will be an ideal boost to my productivity as I am someone who can work for multiple hours in a row as long as I am passionate about what I am doing. I find enjoyment in setting myself goals towards specific tasks and not giving up as long as I have not brought them to completion.

Finally, I would like to share with you an app that I have implemented as a final project for the web development bootcamp I have taken part in during the end of 2021. This was a team project (One product manager, one front-end developer and myself as the back-end developer) for which we had 8 days to implement. We decided to implement the mobile version of an app using Ruby on Rails. It is an environmentally conscient platform that connects people together and gives them the opportunity to borrow stuff from their neighbours.
